

Lino® 2D fix for SolidWorks

Do you know this problem? After having changed the size of a model created with the 3D-CAD-system SolidWorks, many dimensions and texts in the already existing drawing need to be re-arranged manually. The same applies for views which may overlap each other after the model size has been increased.

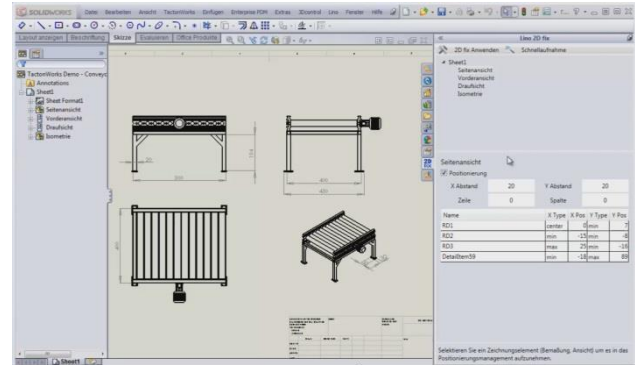

Lino 2D fix - developed by Lino GmbH - helps solving this time-consuming issue automatically. It is a tool for SolidWorks users for automated re-positioning of drawing elements.

Lino 2D fix "remembers" the position of dimensions and text elements in relation to each view and depending on the model representation in the relevant 2D view. After changing the model geometry Lino 2D fix sets the drawing elements back to the new relative positions. It does not play a role whether these dimensions were imported from the 3D model or were created in the drawing.

In addition Lino 2D fix can automatically reposition all drawing views in SolidWorks to avoid overlapping of views.

Automatic positioning of drawing views with Lino 2D fix

These capabilities make Lino 2D fix to a powerful completion for companies using Tacton Configurator for SolidWorks-based product and sales configuration. Lino 2D fix is already in use at several Lino customers.

Lino 2D fix can also be used with other product configurators as DriveWorks®, Configit® or Spydymaxx® in combination with SolidWorks.

Software Made by Lino

Lino offers its own software products for the integration of Tacton product family with CAD (SolidWorks), PDM (ePDM, keytech), CRM (Salesforce), ERP (Navision, Sage Bäurer, SAP) and mobile devices (Android, iOS) under the label "Software Made by Lino".

Among them find additional solutions such as Lino 3D layout product, based on Tacton and SolidWorks for efficient creation of 3D floor plans or Lino 2D fix, a SolidWorks add-in for automatic positioning of drawing views and elements.

Lino has been a certified Microsoft Partner "Silver Application Development" since 2013.
